# Heuristic Evaluation

Visibility of System Status: Status indicators such as icons will be used to convey information.

Match between system and the real world: UI elements will be familiar. For example, these icons (message bubble & bell) are commonly used to represent an inbox and notification panel.

User control and freedom: There will be back buttons for actions, allowing the user to cancel.

Software Developer ⊘ ✎

$50.00/hr ✎

I am a skilled software engineer specializing in web development, with expertise in HTML, CSS, JavaScript, PHP, and Node.js. I excel in creating dynamic, responsive websites and interactive web applications. Proficient in C# for version control and experienced in Quality Assurance and Software Testing, I ensure high-quality deliverables. With a GPA of 3.8 and consistent dean's list placement, I bring dedication and excellence to every project. Ready to tackle new challenges and deliver top-notch solutions for your development needs. ✎

Recognition rather than recall: Information is presented in a way for users to understand. Things are self-explanatory.

Flexibility and efficiency of use: The UI will be meant for one set of users. Experienced and new users should be able to interact with ease.

An aesthetic and minimalist design: The UI looks modern and only displays necessary information.

Help users recognize, diagnose, and recover from errors: There will be error messages, for example, with user inputs.
